# Lab 6

1. Please download the *Mycalculator.java* and drag the file to an existing/new Java project.

2. Run the java source file and you can see the program works like a calculator

3. Please read the java source file and understand how it works as a calculator.

4. Can you point out some issues of the code?

    4.1 How is the <mark>Code Readability</mark>? Do the object names follow Naming Convention? Can you improve that?

    4.2 How is the layout design of the calculator? A little messy? Can you design a better layout for the calculator?

    (Hints: you can employ **BorderLayout** and **GridLayout**)
